

Programming of web pages – Bootstrap

1. Please create an index.html file and prepare it to use Bootstrap.
2. Please create a table using Bootstrap classes. It should contain 4 columns: first name, surname, age, and date of birth.
3. Please create 4 horizontally arranged containers with any text, then please create 3 containers with any pictures. In the next step, please create one text container. Containers should scale according to RWD (responsive web design):
 - for monitors 4-3-1,
 - dla tabletów: 2-2-1-1-1-1
 - dla telefonów: 1-1-1-1-1-1-1-1

Please use the Bootstrap grid system to implement this task.

5. Please create 3 buttons and add the appropriate classes to get the following effect:

6. Please add another subpage called *slider.html*. Then use the carousel control which will act as a mini gallery. Please add any pictures to the control.
7. Please add another subpage called *form.html*. Then create the form using the Bootstrap classes. The form should contain the following elements:
 - 1 input text field,
 - 4 input checkbox fields,
 - 2 radiobox fields,
 - 1 textarea field,
 - 1 dropdown field,
 - 1 file upload field,
 - and the submit button.
8. Please add a modal window containing any text to an existing form (see: <https://getbootstrap.com/docs/4.3/components/modal/>)
